

RESONANCE DAMPER WITH AIR DAMPING

AIR CYLINDER

SET: 4 PIECES

These innovative shock absorbers have been designed to effectively insulate sensitive audio equipment from the floor. Vibrations that would otherwise negatively affect the sound have no chance thanks to a particularly innovative design that uses no mechanical spring elements whatsoever. Two precision-made metal cylinder halves contain the specified air volume whereby two precisely fitted silicone rings create a complete hermetic seal for the two chambers. The rubberized rests help create a reliable connection to the surface on which they stand.
