

## JITTER CLEANER AND USB POWER FILTER

### PURE CLOCK

**MSRP (19%): 68.99**

High-resolution digital audio signals in particular require both a precise and stable clock as well as a clean and interference-free 5V power supply as the basis for high-quality D/A conversion. In addition, the USB interfaces of computers and notebooks are susceptible to electromagnetic interference and signal noise. The Oehlbach PureClock almost completely eliminates the clock jitter and high-frequency interference signals known as „jitter“ and guarantees perfect synchronization between USB interface and converter.
