Oehlbach® Scope Vision Outdoor

Tested by areadvd.de 03/18

GOOD

„[...] Although the Oehlbach Scope Vision Outdoor has been designed particularly for outdoor use, it can as well be used as indoor antenna. The local DVB-T2 HD channels were received in most parts of the room without any problems and with 100% signal quality. Whereas simple rod antennas only grant an impeccable reception from a few spots in the room, the Scope Vision Outdoor is able to offer perfect reception from almost any spot in the room – even without accurate horizontal or vertical adjustment. However, reception of some channels 80km away was not possible in closed rooms.”

Conclusion

“The Oehlbach Scope Vision Outdoor is a compact DVB-T2 antenna for outdoor use that will help in all situations where –due to constructional circumstances- a normal indoor antenna does receive no sufficiently clean signal, despite being placed close to the sender.

Included in delivery is, in addition to the antenna, mounting material that offers the user different options to mount the antenna and to use the amplifier. For the reception of distant senders, the Oehlbach XXL Razor Flat with better reception properties will be an alternative, that can be mounted directly at the window.”

- + Solid antenna for clean DVB-T2 HD reception at close range
- + Many accessories for flexible mounting options
- + Can be used with 5V voltage inserter or 5V feed from DVB-T2 HD receiver
