Oehlbach® XXL Transmission Ultra S High-end satellite cable

Hifi Test 04/2012

Oehlbach® XXL Transmission Ultra S high-end satellite cable

The broadcasting landscape knows no better reception capabilities for HDTV than digital satellite reception. To ensure that high-definition picture and sound signals mean optimal playback quality, selecting the right connecting cable is just as important as selecting a high-quality receiver or HDTV.

The XXL Transmission S high-end cable from Oehlbach guarantees troublefree and absolutely reliable transmission of satellite signals between the satellite wall socket and receiver, namely with highest quality materials and workmanship. For this purpose, the technical design of the cable with 5x shielding consisting of three layers of aluminium foil and dual copper braiding, as well as removable HF sheath current filters in magnetic core technology. The result is a surprising shielding rating of 125 dB! Our tests showed that the Oehlbach cable is rugged and easy to handle with its high-quality 24-carat gold-plated solid metal connectors. Interference from wireless (DECT) or mobile phones had no effect on our 3.1 m test piece.

Brand:	Oehlbach®
Model:	XXL Transmission Ultra S
Features:	75 Ohm, 5x shielding, 125 dB/24-ct. gold-plated contacts, magnetic core filter, inner conductor HPOCC copper, removable filter
Lengths:	1.70 2.20 3.20 5.10 7.50 10.00 metre
