

## Oehlbach® BTR 4.2

“EXCELLENT”

tested by areadvd.de 04/2018

### Conclusion

“Although the Oehlbach transceiver is not a true bargain, it displayed however its versatile, compact and trouble-free strengths during our test. The fact that its surface is not perfect is only a minor detail of the otherwise quite solid workmanship quality. The supplied cables are also alright and it has to be highlighted that in addition to the micro USB cable a power supply unit is included in delivery – and this is not necessarily standard nowadays. Coupling the device to either source feeds or playback units worked smoothly and reliably with our components. There was nothing to complain either about the wireless transmission of the audio signal: In combination with high-quality components the BTR 4.2 delivered a transmission performance with virtually no time lag.”
