

Oehlbach® BTT 5000

Bluetooth-Adapter for stereo & TVs

Recommended by Satvision 06/2015

A lot of people's favorite music today is often stored on a smartphone, tablet PC or MP3 player. Anyone wanting to listen to this music in high quality, and not via the modest speakers of the mobile device or through headphones, has the possibility of transferring it wirelessly to other devices via Bluetooth. Unfortunately, not all hifi systems or TVs are equipped with a Bluetooth interface. The BTT 5000 from Oehlbach® provides these devices with the ability to play music wirelessly via the Bluetooth protocol. And, according to Oehlbach, this music is reproduced in CD quality. In our practical test we paid attention to this very feature.

The BTT 5000 Bluetooth streamer from Oehlbach® is powered via a USB mains adapter or directly via a USB port. The Bluetooth device can be connected to a hifi system or TV, for example, via the 3.5 mm jack cable or optionally via the RCA adapter. All of the required cables are supplied with the unit.

A special feature of the BTT 5000 is that it has a „dual pairing“ function. This means that the BTT 5000 can be connected to two mobile devices, such as a smartphone or tablet PC. It is therefore not necessary to repeat the „pairing“ process, for example, if your partner or friend wants to stream their music on your hifi system. The operating status of the streamer is indicated via a blue LED. If it flashes in a five second interval, it means the BTT 5000 is in its pairing mode and is searching for devices. If the LED illuminates continuously, the streamer is connected to a device. The streamer appears on a mobile device as „BT Music Splitter“. The music stored on your smartphone or tablet PC can now be played via your TV or hifi system over a range of around 10 meters. In our test the BTT 5000 worked perfectly.

All tested devices were quickly recognized and connected easily to the streamer. The high audio quality promised by Oehlbach® was also thoroughly compelling in our test.

Conclusion

The BTT 5000 Bluetooth streamer from Oehlbach® achieved a score of 92.1% in our practical test, meaning it earns our „very good“ accolade. This result was achieved mainly due to the excellent degree of stability and range of the Bluetooth connection. In addition, the streamer also scored points thanks to its „dual pairing function“ and the excellent sound quality of the transmitted audio data. At a cost of around €100 the Bluetooth streamer is in the upper price segment, however, it is thoroughly compelling thanks to its excellent workmanship and extremely stable operation. Audio dropouts or disconnections, which can occur with more reasonably priced models, were not experienced in our series of tests.

- Stability & range (30%) **94%**
- Workmanship (20%) **91%**
- Dimensions (20%) **92%**
- Handling (20%) **91%**
- Features (10%) **93%**
- Price/performance index **1.07**
